

SUPER SUDOKU!

To solve a 4x4 puzzle you must place the numbers 1, 2, 3, and 4 once and only once in each row, in each column and in each 2x2 block.

A finished puzzle might look like this:

				Column
2	4	1	3	
1	3	4	2	Row
3	1	2	4	
4	2	3	1	
Block				

Fill in all the numbers to solve these four Sudoku puzzles.

1		4	2
			3
3	1	2	
	4		

2			1
	4	3	2
	2	1	
4			

3		1	4
	4		2
2			
	3		1

	2		4
	3	2	
	1	4	
3		1	

Hints: Find a line or square that's almost full. Look at the numbers already used in the row, column and block. None of those can be repeated. More difficult Sudoku puzzles have more squares and fewer starting clues. Careful reasoning and patient guesswork are required to complete them.
